Phone: (08518) 225888, 225889

### **HRCT SCAN OF CHEST - PLAIN STUDY**

- Serial axial sections of chest obtained in high frequency algorithm.
- Trachea, major bronchi are normal in course, calibre & attenuation.
- Bilateral apical pleural thickening noted.
- Multiple areas of fibrotic strands noted in bilateral lung fields.
- Pulmonary trunk (41mm) and dilated pulmonary vasculature.
- Few atelectatic patches noted in right lower lobe of lung.
- Mild cardiomegaly.
- Rest of the both lung parenchymas are normal in attenuation and architecture.
- Bones and soft tissues are normal.
- Both Domes of diaphragm are normal.

#### **IMPRESSION :**

- Bilateral apical pleural thickening noted.
- Multiple areas of fibrotic strands noted in bilateral lung fields.
- Pulmonary trunk (41mm) and dilated pulmonary vasculature - Pulmonary arterial hypertension.
- Few atelectatic patches noted in right lower lobe of lung.
- Mild cardiomegaly.

Advised : Clinical correlation, follow up, further evaluation.

**ADVISED : FURTHER EVALUATION, FOLLOW -UP, CLINICAL CORRELATION AND DR.K.RAVINDRANATH REDDY,  
KINDLY DISCUSS IF NECESSARY NOT FOR MEDICO LEGAL PURPOSE. DMRD (MANIPAL), DNB, EXNIMS.,  
CONSULTANT RADIOLOGIST.**
